Video editing
Internet of things
Games
Alpine ski

Summary

Passionate in IT. I come into contact with it on a daily basis. Growing up in an environment of technology, I have been in contact with it since my childhood. With my interests in music and art I have a creative side which I like to use while creating software, apps and games. I have a dream of creating something that is used and helpful to many.

Experience

Internship at Solid Networks in Schoten (Belgium) where I came into contact with managing networks, but also maintaining PC hardware and software. For this intern I went to many different companies around Belgium to help solve problems or set up the IT infrastructure.

Student job at Assuralia as IT helpdesk, helping with issues remotely, physically and help maintaining the network infrastructure.

For my classes I have done many projects with great variety.

Examples:

A delivery tracking device for Internet of Things using LoRaWAN(IoT).

A mobile application that communicates with an ASP.NET Web API.

A 2D, 3D game and Virtual Reality experience.

Conceptualize and begin a freelance idea of a Power bank distributor with mobile app, website and physical object using Raspberry Pi

Go abroad to work with EU students and the company MakeKit to design a new coding learning experience.

Technology skills

Programming: C#, C/C++, Javascript, Python

Software/ Frameworks: Visual Studio (Code), Android Studio, Unity, Blender, Github, Azure, Angular, ASP.NET

Systems: IOS, Android, Windows, Linux

Education

Professional Bachelor Elektronica-ICT – Artesis Plantijn University College Antwerp

EPS (European Project Semester) – Oslo Metropolitan Academie Wilrijk (Music, Art)
